Before and After - The SureCoat Roof System over a flat metal roof

- **30 Standard Colors**
- **No Primers!**
- **No Rust Inhibitors!**
- **No Caulking!**

SureCoat Systems now offers its renewable warranty for Flat Metal Roofs at only 2.5 - 3 gallons per square. All you need is the single-component **SureCoat Roof System** for a flat roof system that can stop oxidation, prevent rust, reflect UV, emit heat and waterproof any metal roof. Stubborn surface rust is easily cleaned with a biodegradable cleaner such as **SureKlean™**.

SureCoat and Sure-A-Thane (components of The SureCoat Roof System) are the longest lasting Cool Roof coatings available for flat and low-slope metal roofs. SureCoat Systems coating products will out perform any acrylic or elastomeric coating you can find anywhere! The SureCoat Roof System is not just another coating! It is a cross-linked, resin enhanced, epoxy-acrylic hybrid, and it is **the only liquid-applied, waterproof, elastomeric coating made for flat roofs that pond water.**

**sustainable, or
restoration projects!**

SureCoat Systems has conducted and documented actual case studies that prove the ASTM testing showing 93% thermal emittance is accurate. A case study conducted in the City of Pomona, California was performed on a low slope metal roof to record the thermal and UV emitting abilities of The SureCoat Roof System coating material.

At the time of this study, the ambient air temperature was only a low 70°F. The temperature on the roof was already 104.3°F. After The SureCoat Roof System was installed, the roof temperature was reduced to 71.6°F, only 1.6 degrees higher than the actual air temperature itself.

Don Hoover is known on the East Coast for his professional work in [all types of roof restoration](#). Recently Hoover and his team resurfaced the 1,000 square foot roof of 1207 Q Street, a building belonging to the Vermont Avenue Baptist Church in Washington, DC. This building used to be a rundown row house. The church purchased the building with the plan to use it as means for additional rental income to the church. After purchased, the church renovated both the interior and exterior of their new building. Next on the list was the much needed roof!

The on-again, off-again showers of the East Coast, make having a leak-free roof difficult and yet of vital importance. Recently the Washington DC area experienced 30 days of rain. After this storm made its way through the surrounding area, the [Vermont Avenue Baptist Church](#) decided that they must move forward with the roof. Don Hoover was able to educate the members of the Vermont Avenue Baptist Church about the importance of choosing a roof replacement alternative that is engineered for waterproofing.

"Short-term mastic and acrylic roof repairs will not ever be able to provide you with a leak-free roof." - Don Hoover

Don Hoover of [Hoover Home Improvements](#) was able to complete the job with his trained and professional crew immediately. Hoover

COMMUNITY

and his crew were able to install this new Liquid Seamless Single Ply system over the existing metal roof after a simple cleaning. The SureCoat Roof System will prevent future damage to this metal roof. Part of the SCRS chemical make-up consists of a resin designed specifically for adhesion to metal while remaining flexible to prevent cracking and peeling.

The building was never put out of service in order to complete [The SureCoat Roof System](#) application as it would have been with many other roof system installations. The Vermont Avenue Baptist Church saved money and down-time with the SCRS roof replacement alternative. Instead, they were given a roof system that comes with a manufacturer's written renewable warranty. Not only was the [Hoover Roofing](#) team able to seal and stop the Vermont Avenue Baptist Church leaks, but they applied a system to their roof that will last as long as their building is in use.
